

ACTINIZYME

Irradiation & Ethylene Oxide Statement

Anagenix's product Actinizyme™ contains no irradiated material or products either directly or indirectly through excipients.

There are no applications of extreme heat, steam, ionizing radiation, ethylene oxide (ETO), 2-chloroethanol or any other physical sterilant used in the processing of the product.

None of the above treatments or chemicals are used/applied in the kiwifruit supply chain, including during cultivation and storage of the fruit.

Additionally, Anagenix confirms that the product is compliant with EU Regulation 231/2012 and its amendments, including EU Regulation 2022/1396.
