

ACTINIZYME

Residual Solvents Statement

Residual solvents are defined as volatile organic chemicals that are used or produced in the manufacture of a product, which may not be completely removed during the manufacturing process.

Anagenix Limited does not intentionally add or use any organic solvents or chemicals in the manufacture, storage or packaging of its product Actinizyme™. As such, we confirm that it does not contain any residual solvents and meets the requirements of General Chapter <467> Residual Solvents of the US Pharmacopeia (USP), Directive 2009/32/EC, and the ICH guidelines (Q3C(R6)).
